Results**Redistributed Votes** (to these colors)

Sherlock
Holmes (Basil Rathbone) Elected

Note: If this doesn't make sense, try reading the [How it works](#) page, view the [table form](#), or [ask a question](#).

The dotted line represents the number of votes that guarantees victory (5.9% of counted votes).

In the first round, the first choices on each ballot are tallied.

Sherlock Holmes (Basil Rathbone) has enough votes to guarantee victory and is declared a winner. To ensure that everyone's vote counts equally, votes that exceed that threshold are counted toward their next highest ranking, if possible. This is actually done by counting a fraction of the ballots most recently counted for the winning candidate.

The dotted line represents the number of votes that guarantees victory (5.9% of counted votes).

Jeff Regan (Jack Webb) has enough votes to guarantee victory and is declared a winner. To ensure that everyone's vote counts equally, votes that exceed that threshold are counted toward their next highest ranking, if possible. This is actually done by counting a fraction of the ballots most recently counted for the winning candidate.

Redistributed Votes (to these colors)

Sherlock Holmes
(John Stanley) Equalized

Note: If this doesn't make sense, try reading the [How it works](#) page, view the [table form](#), or [ask a question](#).

The dotted line represents an elected member's equal share of the votes (6.3% of counted votes).

At this point, the number of remaining candidates equals the number of remaining seats, so the remaining candidates are declared elected.

Transfers are made from each winner until they all have an equal share of the votes.

The dotted line represents an elected member's equal share of the votes (6.3% of counted votes).

At this point, the number of remaining candidates equals the number of remaining seats, so the remaining candidates are declared elected.

Transfers are made from each winner until they all have an equal share of the votes.

Note: If this doesn't make sense, try reading the [How it works](#) page, view the [table form](#), or [ask a question](#).

The dotted line represents an elected member's equal share of the votes (6.3% of counted votes).

At this point, the number of remaining candidates equals the number of remaining seats, so the remaining candidates are declared elected.

In the end, 100% of all cast ballots counted toward a winner. This compares to 96.4% if only the [first-round](#) votes were used. You should be able to see that the winners have a more equal mandate in the final round than in the [first round](#).

Note that even the "highest first-round votes" method is more democratic than most methods used in US public elections: the "vote for 16" method, which allows the largest block of voters to dominate, and the district method, where choices are restricted to the one or two viable candidates within geographical boundaries drawn by the politicians in office.

The [Ballot Depth](#) section shows how much lower rankings contributed to the tally.
